## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 22, 24-28, 30-33 and 38-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,095,381 to Schwanenberg in view of US 6,089,411 to Baudin et al.

Schwanenberg shows a self-closing valve for dispensing flowable material as seen in Figs. 13 and 14, a curved membrane 5, a support segment 26 substantially in the same plane as the annular section 24, a connecting wall 4, star-shaped slits 6 and 7, a reinforcement ring 31 with openings 30, the self-closing valve is made of silicon or an elastomeric plastic material, see column 8 lines 22-25. Schwanenberg is silent about the membrane 5 having a constant thickness. Baudin shows a valve member 44, seen in Fig. 4, having a membrane 42a of constant thickness. It would have been obvious to a person with ordinary skill in the art at the time the invention was made to modify the valve member of Schwanenberg to be of constant thickness to facilitate manufacture of the membrane as taught by Baudin.

### *Allowable Subject Matter*

3. Claims 34-37 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

4. Applicant's arguments filed August 8, 2007 have been fully considered but they are not persuasive. In the device of Schwanenberg the slit valve formed on the membrane wall 5 does not open as the membrane moves from the resting position shown in Fig. 13 to the extended position shown in Fig. 14; the shape and position of the valve with respect to the connecting wall remains unchanged; Therefore, there is none or minimal torque transferred from the connecting wall to the membrane. Additional pressure applied onto the container is necessary to cause the slit valve to open, as seen in Fig. 15. The membrane moves and opens in response to the pressure applied to the content of the container not any torque transferred from the connection wall to the membrane.

In response to the applicant's arguments that the valve of Baudin is not a self-closing valve having a slitted membrane, see column 1 lines 64-67 and column 2, lines 1-13.

***Conclusion***

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 3754

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
